

### **Field day at Biolandhof Kreppold on 4.7.2018: Innovations in composting technology**

Biolandhof Kreppold is participating in the SOLMACC project, which develops and shows methods that improve the climate-friendliness of organic farming. Plant Manager Johannes Kreppold and Bioland consultant Ralf Mack will jointly demonstrate and discuss the non-applicable microbial carbonization (MC) process in theory and practice.

The well-attended field day clearly showed the great interest in alternatives to conventional composting. Visitors, consultant Ralf Mack and farmer Johannes Kreppold intensively discussed the various advantages and disadvantages of the new process. The visit to the composting areas was rounded off with technical presentations on the results of GHG monitoring in the project and background information from the advisory service.
